ITAVA

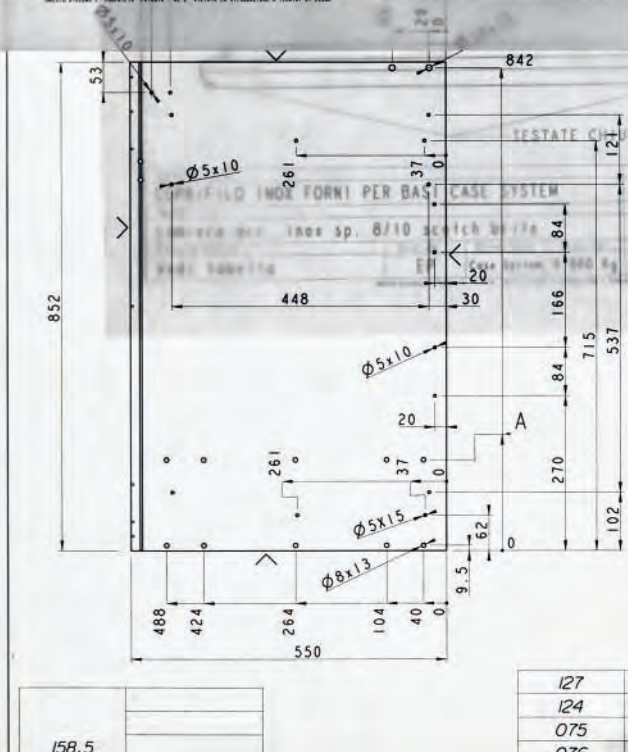

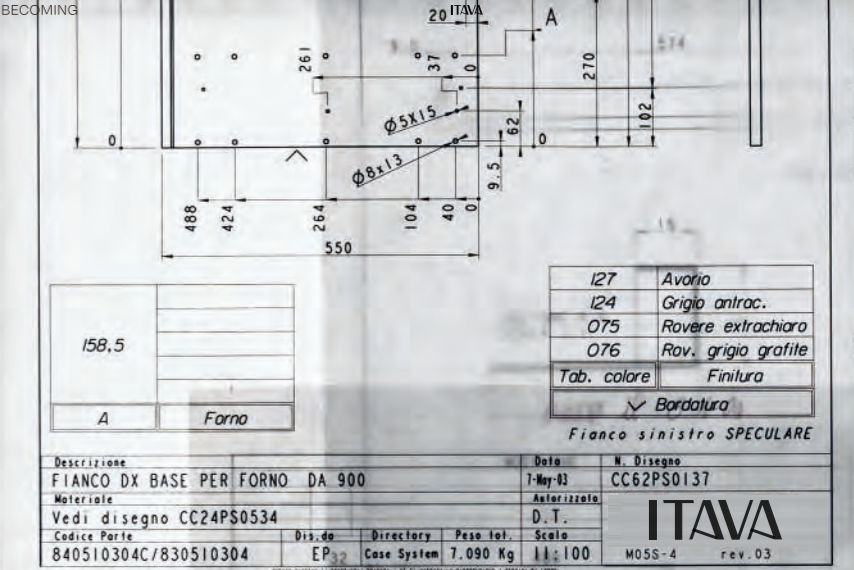

WITH EVEN THE MOST REVOLUTIONARY NEW DESIGN, EVERY KITCHEN EMBODIES ANCIENT CONCEPTS, A MEETING PLACE FOR THE FOUR PRIMARY ELEMENTS — AIR, EARTH, FIRE, WATER — AND A FIFTH, QUINTESSENTIAL ELEMENT: DESIGN.

The kitchen is a work of art, which transforms home space into an extraordinary environment. ITAVA provides multi-functional solutions that can not only hide shapes and functions, but also highlight them with unique materials. Combine extreme aesthetics with top-notch functionality. ITAVA's design focuses on a sense of form. It is good at using simple dotted lines and smooth lines, showing the minimalist, calm and low-key temperament of the product. In terms of material application, ITAVA emphasizes the use of natural materials, and is also good at integrating design innovation, the integration of new and old, modern and classical, nature and technology. In terms of production process, ITAVA adheres to exquisite craftsmanship, is cautious and meticulous, and pursues perfect high quality. Every seam, every handle, and even the hidden oblique edge is exquisitely polished.

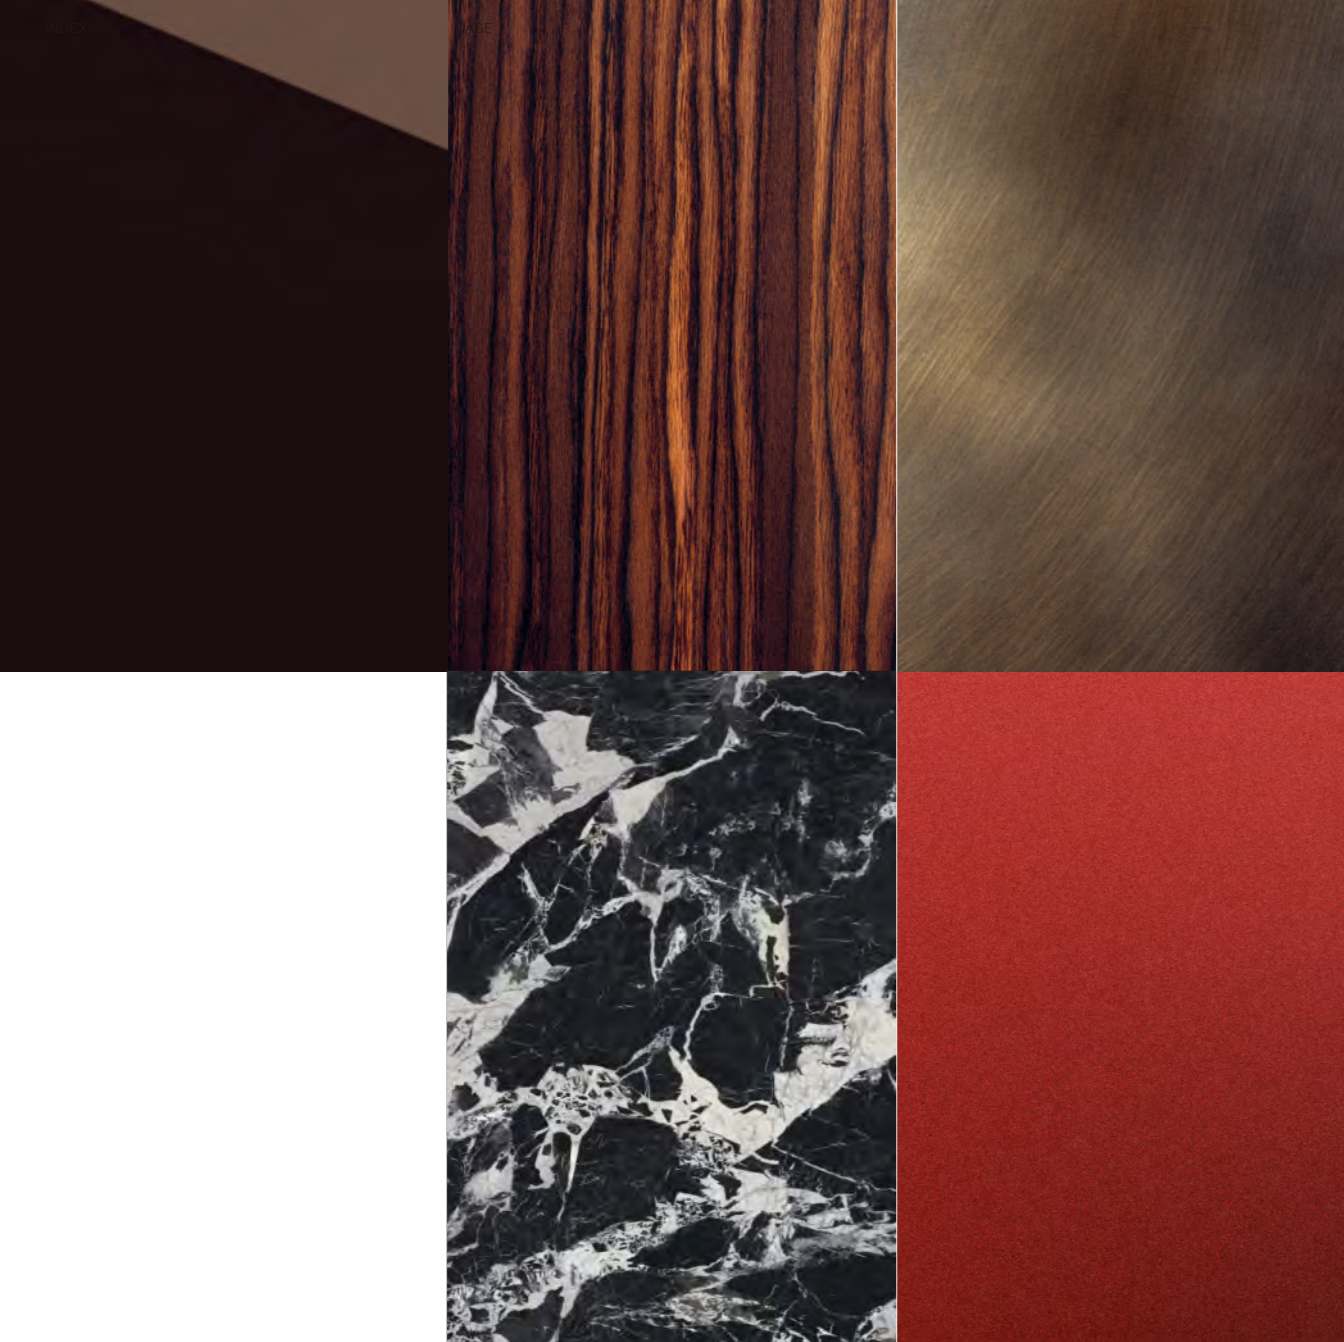

The marble lines of a hundred miles are naturally stitched, and the position of the cabinet is cleverly used. It creates the flexibility of space and provides rich inspiration for different home environments.

This is a set of highly modular cabinets, which can be freely configured. After covering the door, the whole cabinet system can be perfectly hidden in the wall. This design redefines the open space cabinet. The internal modules are highly customized and replaceable.

The sealed module of the structure can be equipped with all the functions of the kitchen: storage, cooking, extraction, dishwasher, food preservation, and can also accommodate washing machines and dryers.

The marble lines of a hundred miles are naturally stitched, and the position of the cabinet is cleverly used. It creates the flexibility of space and provides rich inspiration for different home environments. This is a set of highly modular cabinets, which can be freely configured. After covering the door, the whole cabinet system can be perfectly hidden in the wall. This design redefines the open space cabinet. The internal modules are highly customized and replaceable. The sealed module of the structure can be equipped with all the functions of the kitchen: storage, cooking, extraction, dishwasher, food preservation, and can also accommodate washing machines and dryers. Functional and practical style: for families who need more storage space, you can choose to design the bar with a hanging cabinet above and an integrated cabinet below.

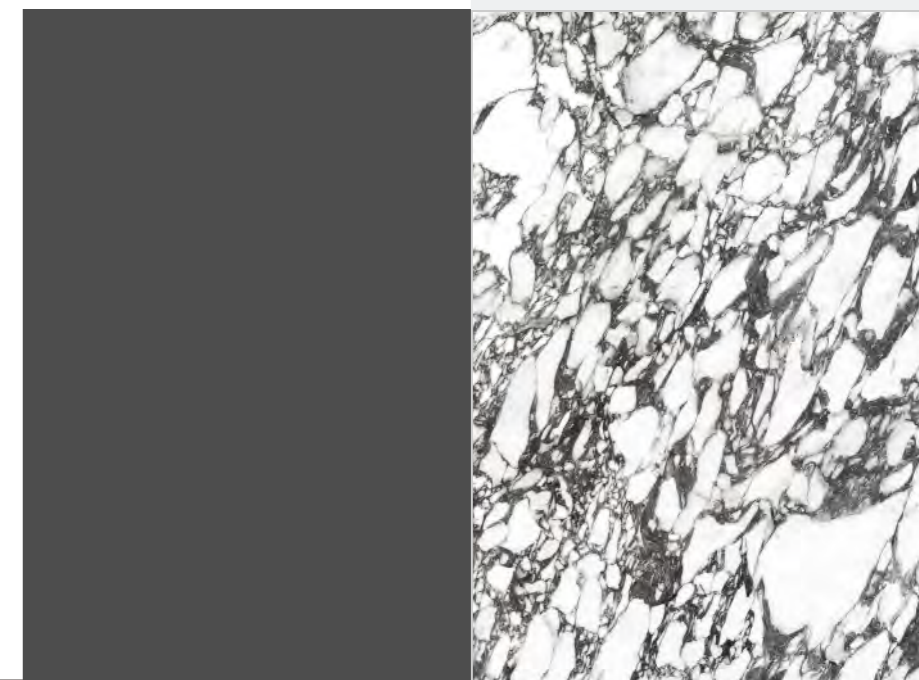

This design is not only beautiful, but also provides additional storage space. However, it should be noted that this design has certain requirements for the size of the space, so as not to make the space look oppressive with heavy cabinets. Cabinets are known for their functional and unadorned appearance, making them a popular choice for a wide range of interior design styles, from traditional to modern. These slimmer profiles give the cabinet doors a more contemporary and modern look. Slim cabinets are especially popular in larger kitchens or spaces with limited room, as they can create a sleek and unobtrusive appearance. At every stage of production we combine manual skills and modern technology. All our departments are modernly organized and structured. Organize a mesmerizing, functional space with good storage, mood-setting lights and dark colors - and stay true to your minimalist soul. Regardless of the size of your room, a kitchen cabinet that makes a difference.
